

Sapphire is the exclusive currency for the world's biggest jackpot game. The Sapphire enables people to win highest prizes in the history and use their tokens worldwide and to buy & sell them freely on the digital exchanges.

Sapphire token (SPH) is built on top of validated Ethereum platform and based on the verified ERC20 standard. The token sales is executed as Initial Coin Offering (ICO) and the token supply is fixed to 1Bn tokens.

Timeline

- Pre-sales starts Oct, 2017
- Pre-ICO starts ~Dec, 2017
- ICO sales start ~Jan, 2018
- Dates estimated, depends on sales quota and velocity.

The nominal value of the coin is:
1 SPH = 1.00 EUR

What is this?

The Sapphire will be released as a new crypto-currency token for global use and published into several selected digital exchanges. The Sapphire is the exclusive currency to be used in the unique and gamified skill-based gambling game.

The game platform will provide an industry-record return percentage of close to, or equal to 100%. The minimum of 98% return percentage (payout rate) is guaranteed.

The game is more accessible to casual players than Poker is: easier to play, always available without time constraints, fun and engaging, and very much rewarding with a higher grand price than that of any existing grand lotteries, such as Eurojackpot or EuroMillions that are pure random-number-generator (RNG) lotteries. The multi-step rewards allow players to win instant prizes along the way to the grand jackpot, for example winnings of 5x bet with 1/10 odds* on every single play round (* estimated; depends on the player profile and how many opponents are online).

Initial Coin Offering

The initial coin offering (ICO) is created to seek for early investors and players to help in the funding of the development and marketing of the gaming platform and the token. Early buyers will get more benefits and discounted price for the token.

- In Pre-sales phase: buy 1 token, get 10 tokens. Nominal price is 0.10€/token.
- In Pre-ICO phase: buy 1 token, get 5 tokens. Nominal price is 0.20€/token.
- In ICO phase: buy 1 token, get 3 tokens. Nominal price is 0.33€/token.
- In Post-ICO phase: when the project is ready and token has been made available through digital exchanges, the nominal value of the token is set to 1.00€/token.

Key Metrics

Supply: 1 Bn (1,000,000,000) tokens
Token standard: ERC20

Token Distribution

Pre-sales phase : 100M tokens
- Sold for early investors (10%)
Pre-ICO phase: 200M tokens
- 180M token sale for buyers (18%)
- 20M held by the founders (2%)
ICO phase: 300M tokens
- Token sale for buyers (30%)
Post-ICO sales: 400M tokens
- 333.3M given out as game rewards for players or allocated for special events (33.3%)
- 66.7M sold for new players (price: 1 EUR per token) (6.67%)

Referral program is good both for the referrer and referral code buyer. Using the referral code upon purchasing, both parties get +30% extra tokens. For example: A refers to B; B buys 10000 tokens. Both A and B get extra 3000 tokens.

Additional **Early Investor Bonus** is provided during the pre-sales phase, which provides extra token allocation bonus from 5% up to 50% depending on the purchase price.

In pre-sales phase, combining both the referral bonus and the early investor bonus, you may buy tokens as low as 0.056€/token.

CEO of PayApi Escrow Ltd
Senior business director and R&D engineer, partner. Over 15 years of international management experience in IT/SW in mobile and cloud businesses. FinTech security and PCI DSS certified payments solution expert.

How does it work?

The players buy tokens to play the game. The game is played with a single click using various information and game statistics to increase the probability of the win. The game can only be played with the Sapphire Coin, available for the purchase through the ICO or later via also via selected digital exchanges.

Players play against other players online and just with a click of a button. The gambling can be done at any time, on any device, with average playing round lasting less than a minute. For increased rewards, more time is required to play. Active players are rewarded regularly. The use of game metrics allow skill-based gaming and playing smarter than others.

Referral Lottery - Win Before The Game Is Ready

Starting already during the ICO phase, you get to win rewards before the game is even ready! On weekly basis, a special "Win Without Playing" referral lottery is arranged, including several rewards starting from 10k up to 1M tokens. The draw is executed as a classic lottery, and it will include all the current token investors/buyers automatically.

Are We A Pump & Dump ICO?

Absolutely not! Our technical team has strong background in implementing PCI DSS certified secure enterprise application platforms and online gambling platforms.

The ICO is used to develop a unique gambling game experience with world record prices and industry-best payout rates. We love what we do; we do it for you.

Escrow

To protect coin investors and token sales, an agreement with a 3rd party secure payments company ([PayApi Escrow Ltd](#)) has been established. The company will coordinate and monitor the token sales and hold the funds until required milestones have been reached.

The escrow process ensures that if minimum funding targets are not met; investors will get their funds back from the trusted organization (a full refund minus payment processing fees of 3% will be issued).
